PS6 · JOB MATCH AGENT

CareerCraft

An AI agent that tells students which jobs fit them, and what to learn next.

The live app: chat on the left, shortlist on the right

SRM Agentic AI Hackathon · Team number and member names go here

The problem: students apply blind

1. **They apply to jobs they cannot get**
   A CGPA cut-off or branch rule quietly blocks them.

2. **They miss the jobs that fit**
   Good matches are buried in a long list of openings.

3. **They do not know what to learn**
   Nobody says which skill would open more doors.

One student, one job board

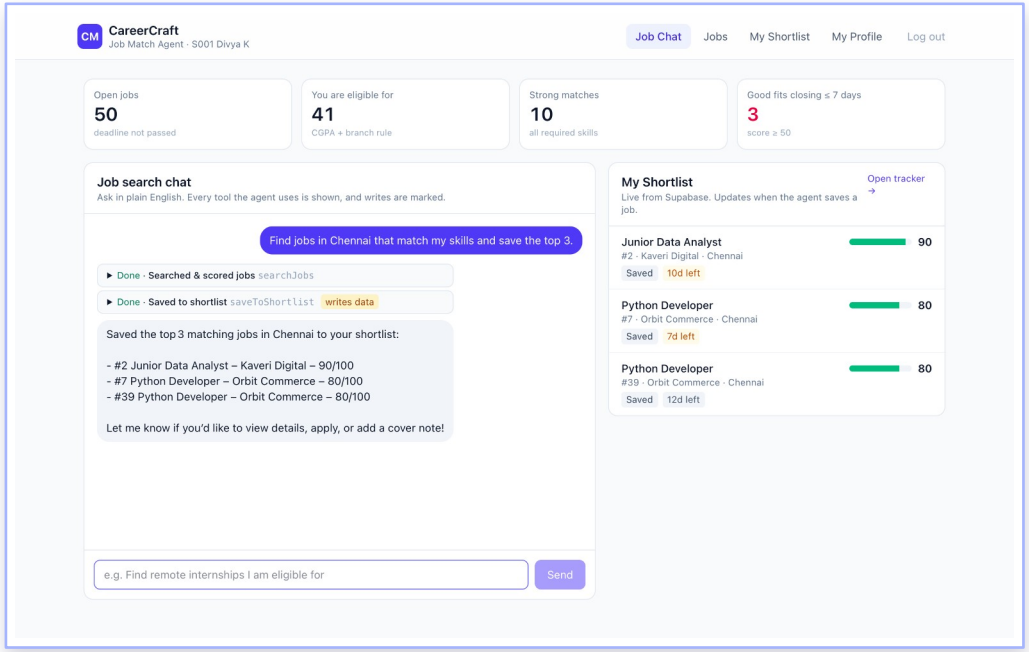

50 open jobs

41 she is eligible for

10 really match her skills

Real numbers from our data for student Divya K (CSE, CGPA 8.1)

Our solution: just ask the agent

Match score = 70% required skills + 20% bonus skills + 10% preferred city

1

Ask in plain English

"Find jobs in Chennai that match my skills and save the top 3."

2

The agent checks and scores

It skips jobs she is not eligible for and gives every other job a score out of 100.

3

The best jobs are saved

The top matches land in her shortlist, live on screen.

How the agent works

Student asks
in plain English

›

AI picks a tool
by itself, no if/else

›

Zod checks it
bad arguments are rejected

›

Tool runs
reads or writes Supabase

›

Answer shown
with every step visible

Steps 2 to 4 repeat until the agent can answer. The AI never touches the database directly.

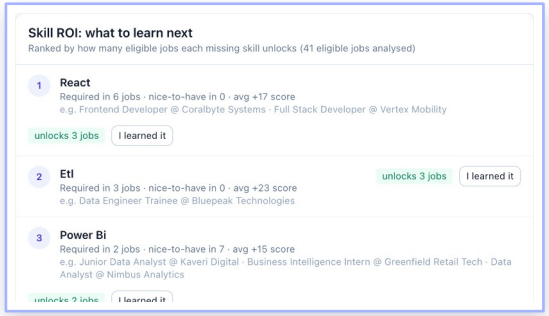

6 tools that read

- getMyProfile
- searchJobs
- scoreJobMatch
- getSkillGapPlan
- whatIfLearnSkill
- getMyShortlist

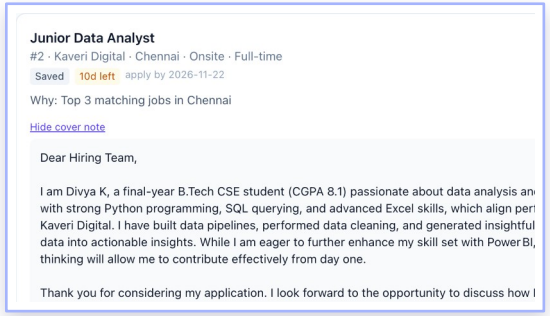

4 tools that write to Supabase

- saveToShortlist
- updateMySkills
- updateApplicationStatus
- saveCoverNote

Our own idea: a coach, not just a search

Skill ROI plan

Ranks the skills she is missing by how many jobs each one unlocks. React alone unlocks 3 jobs.

What-if simulator

Try a skill before learning it. With Power BI, one internship jumps from 65 to 100.

Tracker and cover notes

Saved, applied, interview, offer. Deadline countdown and an AI cover note for each job.

The guide asked for a job search. We also answer: "What should I learn next?"
